

A classic in counterfeit detection equipment

The **CT 570** works worldwide on almost all currencies.

So-called polymer currencies, such as in Australia and Canada, are excepted from the examination. The handling of the detector pen is very simple: mark the bill to be checked in a bright place, when the line immediately changes into a dark colour, the bill is forged.

CT 570

- ▶ for a lot of currencies
- ▶ easy-to-use: no difficult procedures
